

KINEROS-OPUS documentation?

Posted by avogl - 2009/10/06 21:31

I noticed the new KINEROS-OPUS model executable file in the downloads section, but I couldn't find any documentation. How does one run this model and use all the new functionality that's mentioned in the description?

Thanks!

Hi Adrian,

I'll be uploading the updated documentation, AGWA installer, and related files for the new model later this week. We delivered hard copies of the new product last week but decided to hold off on making everything available on the website while a few more changes were made. It will be there by Thursday evening at the latest.

It should be noted that the KINEROS-OPUS model is very new and as such has much vetting to go through.

Shea
